

5.5V Low Loss Power Distribution Switch

Features

- Input voltage: 2.7V to 5.5V
- Typical 75mΩ on-resistance
- Five different continuous current versions
- Under voltage lockout
- Over current protection, short circuit protection and over temperature protection
- Fault time 5ms typically with blanking
- Reverse blocking (no body diode)
- No reverse current when power ON or power OFF
- Enable polarity: active high or active low
- Compact SOT23-5, SOIC-8, EP-MSOP8 and MSOP-8 packages

Applications

- USB Ports/Hubs
- Digital TV
- Set-Top Boxes
- VOIP Phones

Descriptions

The DIO7003 power distribution switch is intended for applications where precision current limiting is required or heavy capacitive loads and short circuits are encountered. The power switch rising and falling times are controlled to minimize current surges during turning on/off.

The DIO7003A/B/C/D/E provide separately 350mA/700mA/1A/1.5A/2A five current levels.

The DIO7003 device limits the output current under a safe level by using a constant current mode when the output load exceeds the current limit threshold.

The DIO7003 is available in the SOT23-5, SOIC-8, EP-MSOP8 and MSOP-8 packages. It is rated over the -40°C to 85°C temperature range.

Typical Application

Ordering Information

Figure 1 Pin Assignment

Pin Description

Pin Name	Pin Description			
OUT	Output pin, decoupled with a 10μF capacitor to GND			
GND	Ground pin			
FLG	Fault flag output			
EN/EN	Active high or Active low. Do not leave it floating			
IN	Input pin, decoupled with a 10µF capacitor to GND			

Absolute Maximum Ratings

Stresses beyond those listed under "Absolute Maximum Rating" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Parameter			Rating	Unit		
All pins				-0.3 to 6	V	
		θ _{JA} ,SO	T23-5	250		
D. I		θ _{JA} ,SOIC-8		130		
Package Thermal Resistance		θ _{JA} , EP-MSOP8		100	°C/W	
		θ _{JA} , MSOP-8		166		
Junction Temperature Range			150	°C		
Lead Temperature (Soldering, 10 sec)			260	°C		
Storage Temperature Range (T _{STG})			-65 to 150	°C		
ESD Susceptibility	HBM (Human Body Mode)		lode)	6		
	CDM (Charged Device Mode)		e Mode)	2	- kV	

Note: Input and output negative ratings may be exceeded if input and output diode current ratings are observed.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation to ensure optimal performance to the datasheet specifications. DIOO does not recommend exceeding them or designing to Absolute Maximum Ratings.

Parameter	Rating	Unit
IN	2.7 to 5.5	V
All other pins	0 to 5.5	V
Junction Temperature Range	-40 to 125	°C
Ambient Temperature Range	-40 to 85	°C

Electrical Characteristics

 T_A =25°C V_{IN} = 5V, unless otherwise noted.

Symbol	Parameter		Conditions	Min.	Тур.	Max.	Unit	
V _{IN}	Input Voltage Range			2.7		5.5	V	
I _{SHDN}	Shut down Input Current		Open load, IC Disabled		0.2	1	μΑ	
ΙQ	Quiescent Supply Current		Open load, IC Enabled		50	88	μΑ	
R _{DS(ON)}	FET R _{ON}		I _{OUT} = 100mA		75	99	mΩ	
V _{EN(H)}	EN Rising Threshold		V _{IN} = 2.7V to 5.5V	1.4			V	
.,	EN E-line Throughold		V _{IN} = 4.5V to 5.5V			0.6	.,	
V _{EN(L)}	EN Falling Threshold		V _{IN} = 2.7V to 4.5V			0.5	V	
I _{EN}	EN Leakage Current	/	V _{EN} = 5.0V			1	μΑ	
V _{IN_UVLO}	IN UVLO Threshold					2.5	V	
V _{IN_HYS}	IN UVLO Hysteresis				240	400	mV	
			DIO7003HA, DIO7003LA	0.375	0.5	0.625		
			DIO7003HB, DIO7003LB	0.75	1	1.25

			DIO7003HD, DIO7003LD	1.5	2	2.5		
			DIO7003HE, DIO7003LE	2.1	2.5	3.1		
los	Short Current Limit				I _{LIM,Typ} ×1.2	I _{LIM,Max} ×1.2	Α	
T _{ON}	Turn-on Time		R_L =10 Ω , C_{OUT} =1 μ F		400		μs	
T _{OFF}	Turn-off Time		R _L =10Ω, C _{OUT} =1μF		20		μs	
T _{SD}	Thermal Shut down Temperature				140		°C	
	Thermal Shut down Hysteresis				20		°C	

Block Diagram

Application Information

Power Supply Considerations

A $10\mu F$ ceramic capacitor from V_{IN} to GND to prevent the input voltage from dropping during the hot-plug condition is strongly recommended. However higher capacitance could help reduce the voltage drop. Further more, bypassing the output with a $10\mu F$ ceramic capacitor improves the immunity of the device to short-circuit transients, because an output short will cause ringing on the input without the input capacitor. It could destroy the internal circuitry when the input transient voltage exceeds the absolute maximum supply voltage even for a short duration.

Under Voltage Lockout

A voltage sense circuit monitors the input voltage. When the input voltage is below approximately 2.4V, a control signal turns off the power switch.

Enable

The logic enable controls the power switch, the bias for the charge pump, driver, and other circuitry to reduce the supply current. The EN control pin must be driven to a logic high or logic low for a clearly defined signal input. Floating these control lines may cause unpredictable operation.

Over-Current Protection

The DIO7003 responds to over current conditions by limiting output current to the I_{LIM} levels. When an over current condition is detected, the device maintains a constant output current and reduces the output voltage accordingly. Complete shut down occurs only if the fault is present long enough to activate thermal limit.

Two possible overload conditions can occur. In the first condition, an excessive load occurs while the device is enabled. When the excessive load occurs, very high currents may flow for a short time before the current limit circuit can react. After the current limit circuit has tripped (reached the overcurrent trip threshold) the device switches into constant current mode to limit the current close to I_{LIM}.

In the second condition, the load is gradually increasing beyond the recommended operating current. The current is permitted to rise until the currentlimit threshold (I_{LIM}) is reached or until the thermal limit of the device is

exceeded. The DIO7003 is capable of delivering current up to the current limit threshold (I_{LIM}) without damaging the device. Once the threshold has been reached, the device switches into its constant current mode.

Thermal Protection

Thermal protection prevents damage to the IC when heavy overload or short circuit conditions are present for extended periods of time. The conditions force the DIO7003 into constant current mode, and under short circuit conditions, the voltage across the switch is equal tothe input voltage. The increased dissipation causes the junction temperature to rise to high levels. The protection circuit senses the junction temperature of the switch and shuts it off. Hysteresis is built into the thermal sense circuit, and after the device has cooled approximately 20 degrees, the switch turns back on. The switch continues to cycle in this way until the overload or input power is removed.

Reverse-voltage Protection

The reverse-voltage protection feature turns off the P-channel MOSFET whenever the output voltage exceeds the input voltage by 175mV (typ) for 4ms (typ). A reverse current of (V_{OUT}-V_{IN})/R_{DS(on)} will be present when this occurs. This prevents damage to devices on the input side of the DIO7003 by preventing significant current from sinking into the input capacitance. The DIO7003 devices allow the P-channel MOSFET to turn on once the output voltage goes bellow the input voltage for the same 4ms deglitch time.

FLG Output

An error Flag is an open-drained output of an N-channel MOSFET. Flag output is pulled low when the below conditions happen: input under voltage lockout, output current limit, output short circuit and over temperature shut down. The flag response delay time is 5ms typically.

CONTACT US

Dioo is a professional design and sales corporation for high-quality and performance analog semiconductors. The company focuses on industry markets, such as, cell phone, handheld products, laptop, and medical equipment and so on. Dioo's product families include analog signal processing and amplifying, LED drivers and charger IC. Go to http://www.dioo.com for a complete list of Dioo product families.

For additional product information, or full datasheet, please contact with our Sales Department or Representatives.
